

Telerehabilitation Program

Call Today To Schedule A Virtual Assessment!

From Success Neuro Rehabilitation Outpatient Centers, we offer an individualized Telerehabilitation Program delivered by a highly experienced neurological rehabilitation team of certified brain injury specialists from the safety of your home and community.

If you're limited by travel, injury, or a complex condition, we will virtually bring our services to you so you can start your recovery and get back to the things you love.

How Does Telerehabilitation Work?

Serving individuals across Pennsylvania & Nationwide!

- We utilize an accessible video platform to teach and build upon skills that are typically acquired in our residential or neuro outpatient setting. Sessions are delivered one-on-one in real-time and are private, secure, and adhere to HIPAA requirements.
- Telerehabilitation sessions may be offered in place of or in addition to in-person treatment dependent on an individual assessment. All you will need is a computer or smart device with a camera, microphone, and internet access.

Telerehabilitation is offered with our newest Brain Injury Programs: Post Concussion Intensive Program & Veteran Services

Telerehabilitation Services
